This cribsheet shows you how to make the module reading list that your librarian has created for you appear in the associated Moodle module.

Your subject Librarian will have created the module list, published it and linked it to the relevant SITS module. This means that you can make the list appear in your Moodle instance by enabling the reading list Moodle block. The instructions for enabling the block are below.

Displaying lists in Moodle

Go to your Moodle module and Turn editing on.

Locate the Blocks menu on the bottom right of the page. Click on the drop-down arrow and select Reading Lists.
The **Reading Lists** box will then appear above the Blocks box and contain links to any published reading lists attached to that module.

![Reading Lists](image.png)

The Moodle module must be linked to SITS in order for the reading list to appear. If the reading list does not appear when you enable the block, check your SITS linkage:

1. Click on **SITS** from the Administration block on the left of the page
2. Click **Manage your SITS modules** and tick the box in the Select column
3. Select **Link selected SITS modules to the course**
4. Click **OK** to link the course
5. Click **Continue**, Status column will display ‘Linked’ and a green tick will appear.

![Module List](image.png)

6. Return to the main course page, the list should now appear in the Reading Lists block.

If you have checked your SITS linkage and the reading list still does not display, contact your subject librarian. If you do not wish to link your Moodle course to SITS, you can copy the reading list url from RLO and paste it into Moodle.

**Further help**

Please feel free to contact your subject librarian for further help or email subjecthelp@bolton.ac.uk.
